

# FORMULE ED EQUIVALENZE

## FORMULAS AND EQUIVALENCES

$$V \times \Delta T \times K = [\text{kcal/h}]$$

### CALCOLO DELLA POTENZA TERMICA HEATING POWER CALCULATION

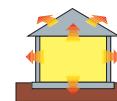

**V** = Volume ambiente: Lunghezza x Larghezza x Altezza (m<sup>3</sup>).  
Volume: Length x Width x Height (m<sup>3</sup>).

**ΔT** = Definisce in °C il divario tra la temperatura esterna e la temperatura interna che si vuole ottenere.  
Is the difference between external temperature and required internal temperature.

**K** = Coefficiente di dispersione del calore in base ai materiali impiegati nella costruzione.  
Coefficient of loss heat according to the standard of insulation in your building.

K = 0,6 - 0,9

Costruzione ben isolata: doppi muri, materiale isolante a soffitto, a parete e pavimenti, doppi vetri alle finestre e porte coibentate.  
Good insulation: double wall, insulating ceiling material, insulating wall and floor material, double-glazed windows and insulated doors.

K = 1,0 - 1,9

Costruzione discretamente isolata: doppi muri, materiale isolante a soffitto, poche finestre con vetri singoli.  
Reasonable insulation: double wall, insulating ceiling material and few windows with single glasses.

K = 2,0 - 2,9

Costruzione poco isolata: muri semplici con parti vetrate e tetto non coibentato.  
Fair insulation: simple walls with glazed parts and non insulated roof.

K = 3,0 - 4,0

Costruzione non isolata: coperture in legno, lamiera o materiale plastico.  
Little or no insulation: wood covers, plate or plastic materials.

Es. calcolo potenza termica - Ex. of heating power calculation

$$V = 20 \text{ m} \times 6 \text{ m} \times 4 \text{ m} = 480 \text{ m}^3$$

$$\Delta T = -10^\circ\text{C} \text{ T est., } +24^\circ\text{C} \text{ T int. } \Delta T = +34^\circ\text{C}$$

$$K = 4,0$$

$$480 \text{ m}^3 \times 34^\circ\text{C} \times 4,0 \text{ K} = 65.280 \text{ [kcal/h]}$$

### equivalenze - equivalences

#### Potenza Termica Heating Power

$$\begin{aligned} 1 \text{ kW} &= 860,61 \text{ kcal/h} \\ 1 \text{ kW} &= 3415,18 \text{ BTU/h} \\ 1 \text{ kcal/h} &= 3,97 \text{ BTU/h} \end{aligned}$$

#### Temperatura Temperature

$$\begin{aligned} {}^\circ\text{F} &= 9/5 \times {}^\circ\text{C} + 32 \\ {}^\circ\text{K} &= {}^\circ\text{C} + 273,15 \end{aligned}$$

#### Capacità Capacity

$$\begin{aligned} 1 \text{ l} &= 0,2641 \text{ Gallon} \\ 1 \text{ l} &= 0,22 \text{ Gallon (UK)} \end{aligned}$$

#### Pressione Pressure

$$\begin{aligned} 1 \text{ bar} &= 14,504 \text{ PSI} \\ 1 \text{ bar} &= 10^5 \text{ Pa} \\ 1 \text{ mm H}_2\text{O} &= 9,806 \text{ Pa} \end{aligned}$$

#### Dimensioni Dimensions

$$\begin{aligned} 1 \text{ mm} &= 0,03937 \text{ Inches} \\ 1 \text{ mm} &= 0,00328 \text{ Feet} \end{aligned}$$

#### Peso Weight

$$\begin{aligned} 1 \text{ kg} &= 35,274 \text{ Ounces} \\ 1 \text{ kg} &= 2,205 \text{ Pounds} \end{aligned}$$

#### Consumo Consumption

$$\begin{aligned} 1 \text{ l/h} &= 0,2641 \text{ Gallon/h} \\ 1 \text{ l/h} &= 0,22 \text{ Gallon (UK)/h} \\ 1 \text{ m}^3/\text{h} &= 35,31 \text{ CFh} \end{aligned}$$

#### Superficie Surface

$$\begin{aligned} 1 \text{ m}^2 &= 1550,03 \text{ Inches}^2 \\ 1 \text{ m}^2 &= 10,764 \text{ Feet}^2 \end{aligned}$$

#### Portata Flow

$$1 \text{ m}^3/\text{h} = 0,5885 \text{ CFm}$$
